Case-level diagnostics reveal localization failures hidden by field scores
FNO
DeepONet
APD perturbation
Conduction slowing
Mixed APD/conduction
A Dice versus LAT field accuracy
Patch Dice at threshold 0.5
Per-case LAT R^2
B Dice versus APD90 field accuracy
Patch Dice at threshold 0.5
Per-case APD90 R^2
C Center error versus Dice
Patch Dice at threshold 0.5
Patch-center error (normalized sheet units)
D False-positive area in homogeneous cases
Predicted positive area fraction
Held-out homogeneous case (n = 12)
Per-case R2 is diagnostic and is not the pooled-pixel headline R2. Every point is one independent held-out base case.
